

Lecture 4-2

More NumPy

Week 5 Wednesday

Miles Chen, PhD

Based on Python Data Science Handbook by Jake VanderPlas

```
In [1]: import numpy as np
```

Concatenating Arrays

Concatenating Arrays

In [2]:

```
x = np.arange(4)
y = np.arange(100, 104)
print(x)
print(y)
```

```
[0 1 2 3]
```

```
[100 101 102 103]
```

Concatenating Arrays

In [2]:

```
x = np.arange(4)
y = np.arange(100, 104)
print(x)
print(y)
```

```
[0 1 2 3]
[100 101 102 103]
```

In [3]:

```
np.concatenate([x,y])
```

Out[3]: array([0, 1, 2, 3, 100, 101, 102, 103])

Concatenating Arrays

In [2]:

```
x = np.arange(4)
y = np.arange(100, 104)
print(x)
print(y)
```

```
[0 1 2 3]
[100 101 102 103]
```

In [3]:

```
np.concatenate([x,y])
```

Out[3]: array([0, 1, 2, 3, 100, 101, 102, 103])

`np.concatenate` has an argument for axis. The axes are 0-indexed.

Concatenating Arrays

```
In [2]: x = np.arange(4)
        y = np.arange(100, 104)
        print(x)
        print(y)
```

```
[0 1 2 3]
[100 101 102 103]
```

```
In [3]: np.concatenate([x,y])
```

```
Out[3]: array([ 0,  1,  2,  3, 100, 101, 102, 103])
```

`np.concatenate` has an argument for axis. The axes are 0-indexed.

```
In [4]: np.concatenate([x,y], axis = 0)
```

```
Out[4]: array([ 0,  1,  2,  3, 100, 101, 102, 103])
```

Here, the array is 1 dimension so it just puts the two side by side. have to reshape to stack them or use `vstack`

Let's try to concatenate in the other direction. We specify `axis = 1`

Let's try to concatenate in the other direction. We specify axis = 1

```
In [5]: np.concatenate([x,y], axis = 1) # throws an error
```

```
-----  
AxisError                                Traceback (most recent call last)  
<ipython-input-5-2cd32e4cabd5> in <module>  
----> 1 np.concatenate([x,y], axis = 1) # throws an error  
  
<__array_function__ internals> in concatenate(*args, **kwargs)  
AxisError: axis 1 is out of bounds for array of dimension 1
```

Let's try to concatenate in the other direction. We specify axis = 1

```
In [5]: np.concatenate([x,y], axis = 1) # throws an error
```

```
-----  
AxisError                                Traceback (most recent call last)  
<ipython-input-5-2cd32e4cabd5> in <module>  
----> 1 np.concatenate([x,y], axis = 1) # throws an error  
  
<__array_function__ internals> in concatenate(*args, **kwargs)  
AxisError: axis 1 is out of bounds for array of dimension 1
```

```
In [6]: x.shape # you can't use axis with index 1, because axis index 1 does not exist
```

```
Out[6]: (4,)
```

Let's try to concatenate in the other direction. We specify axis = 1

```
In [5]: np.concatenate([x,y], axis = 1) # throws an error
```

```
-----  
AxisError                                Traceback (most recent call last)  
<ipython-input-5-2cd32e4cabd5> in <module>  
----> 1 np.concatenate([x,y], axis = 1) # throws an error  
  
<__array_function__ internals> in concatenate(*args, **kwargs)  
AxisError: axis 1 is out of bounds for array of dimension 1
```

```
In [6]: x.shape # you can't use axis with index 1, because axis index 1 does not exist
```

```
Out[6]: (4,)
```

```
In [7]: np.vstack([x,y]) # vstack will vertically stack unidimensional arrays
```

```
Out[7]: array([[ 0,  1,  2,  3],  
               [100, 101, 102, 103]])
```

```
In [8]: x.reshape(1,4)
```

```
Out[8]: array([[0, 1, 2, 3]])
```

```
In [8]: x.reshape(1,4)
```

```
Out[8]: array([[0, 1, 2, 3]])
```

```
In [9]: y.reshape(1,4)
```

```
Out[9]: array([[100, 101, 102, 103]])
```

```
In [8]: x.reshape(1,4)
```

```
Out[8]: array([[0, 1, 2, 3]])
```

```
In [9]: y.reshape(1,4)
```

```
Out[9]: array([[100, 101, 102, 103]])
```

```
In [10]: np.concatenate([x.reshape(1,4), y.reshape(1,4)], axis = 0)
```

```
Out[10]: array([[ 0,  1,  2,  3],  
                [100, 101, 102, 103]])
```

```
In [8]: x.reshape(1,4)
```

```
Out[8]: array([[0, 1, 2, 3]])
```

```
In [9]: y.reshape(1,4)
```

```
Out[9]: array([[100, 101, 102, 103]])
```

```
In [10]: np.concatenate([x.reshape(1,4), y.reshape(1,4)], axis = 0)
```

```
Out[10]: array([[ 0,  1,  2,  3],  
                [100, 101, 102, 103]])
```

note that when I concatenate along axis 0 for a 2-dimensional array, it concatenates by rows. In a 2D array, index 0 is for rows, and index 1 is for columns.

```
In [8]: x.reshape(1,4)
```

```
Out[8]: array([[0, 1, 2, 3]])
```

```
In [9]: y.reshape(1,4)
```

```
Out[9]: array([[100, 101, 102, 103]])
```

```
In [10]: np.concatenate([x.reshape(1,4), y.reshape(1,4)], axis = 0)
```

```
Out[10]: array([[ 0,  1,  2,  3],  
               [100, 101, 102, 103]])
```

note that when I concatenate along axis 0 for a 2-dimensional array, it concatenates by rows. In a 2D array, index 0 is for rows, and index 1 is for columns.

```
In [11]: np.concatenate([x.reshape(1,4), y.reshape(1,4)], axis = 1)
```

```
Out[11]: array([[ 0,  1,  2,  3, 100, 101, 102, 103]])
```

In [12]:

```
xm = np.arange(6).reshape((2,3))  
ym = np.arange(100,106,1).reshape((2,3))  
print(xm)  
print(ym)
```

```
[[0 1 2]  
 [3 4 5]]  
[[100 101 102]  
 [103 104 105]]
```

In [12]:

```
xm = np.arange(6).reshape((2,3))  
ym = np.arange(100,106,1).reshape((2,3))  
print(xm)  
print(ym)
```

```
[[0 1 2]  
 [3 4 5]]  
[[100 101 102]  
 [103 104 105]]
```

In [13]:

```
xm.shape
```

Out[13]: (2, 3)

In [12]:

```
xm = np.arange(6).reshape((2,3))  
ym = np.arange(100,106,1).reshape((2,3))  
print(xm)  
print(ym)
```

```
[[0 1 2]  
 [3 4 5]]  
[[100 101 102]  
 [103 104 105]]
```

In [13]:

```
xm.shape
```

Out[13]: (2, 3)

In [14]:

```
ym.shape
```

Out[14]: (2, 3)

```
In [15]: print(np.concatenate([xm,ym])) # default behavior concatenates on axis 0
```

```
[[ 0  1  2]
 [ 3  4  5]
 [100 101 102]
 [103 104 105]]
```

```
In [15]: print(np.concatenate([xm,ym])) # default behavior concatenates on axis 0
```

```
[[ 0  1  2]
 [ 3  4  5]
 [100 101 102]
 [103 104 105]]
```

```
In [16]: print(np.concatenate([xm,ym], axis = 0))
# axes are reported as rows, then columns.
# concatenating along axis 0 will concatenate along rows
```

```
[[ 0  1  2]
 [ 3  4  5]
 [100 101 102]
 [103 104 105]]
```

```
In [15]: print(np.concatenate([xm,ym])) # default behavior concatenates on axis 0
```

```
[[ 0  1  2]
 [ 3  4  5]
 [100 101 102]
 [103 104 105]]
```

```
In [16]: print(np.concatenate([xm,ym], axis = 0))
# axes are reported as rows, then columns.
# concatenating along axis 0 will concatenate along rows
```

```
[[ 0  1  2]
 [ 3  4  5]
 [100 101 102]
 [103 104 105]]
```

```
In [17]: print(np.concatenate([xm,ym], axis = 1))
# concatenating along axis 1 will concatenate along columns
```

```
[[ 0  1  2 100 101 102]
 [ 3  4  5 103 104 105]]
```

```
In [18]: np.vstack([xm, ym])
```

```
Out[18]: array([[ 0,  1,  2],  
                [ 3,  4,  5],  
                [100, 101, 102],  
                [103, 104, 105]])
```

```
In [18]: np.vstack([xm, ym])
```

```
Out[18]: array([[ 0,  1,  2],  
                [ 3,  4,  5],  
                [100, 101, 102],  
                [103, 104, 105]])
```

```
In [19]: np.hstack([xm, ym])
```

```
Out[19]: array([[ 0,  1,  2, 100, 101, 102],  
                [ 3,  4,  5, 103, 104, 105]])
```

```
In [18]: np.vstack([xm, ym])
```

```
Out[18]: array([[ 0,  1,  2],  
                [ 3,  4,  5],  
                [100, 101, 102],  
                [103, 104, 105]])
```

```
In [19]: np.hstack([xm, ym])
```

```
Out[19]: array([[ 0,  1,  2, 100, 101, 102],  
                [ 3,  4,  5, 103, 104, 105]])
```

You can always use `vstack` and `hstack` for 2D arrays.

Math Operators with numpy arrays

Math Operators with numpy arrays

In [20]:

```
print(x)  
print(y)
```

```
[0 1 2 3]  
[100 101 102 103]
```

Math Operators with numpy arrays

In [20]:

```
print(x)  
print(y)
```

```
[0 1 2 3]  
[100 101 102 103]
```

In [21]:

```
x + 5
```

Out[21]: array([5, 6, 7, 8])

Math Operators with numpy arrays

In [20]:

```
print(x)  
print(y)
```

```
[0 1 2 3]  
[100 101 102 103]
```

In [21]:

```
x + 5
```

Out[21]: array([5, 6, 7, 8])

In [22]:

```
x + y # elementwise addition
```

Out[22]: array([100, 102, 104, 106])

Math Operators with numpy arrays

In [20]:

```
print(x)
print(y)
```

```
[0 1 2 3]
[100 101 102 103]
```

In [21]:

```
x + 5
```

Out[21]: array([5, 6, 7, 8])

In [22]:

```
x + y # elementwise addition

Sorting along rows or columns

A useful feature of NumPy's sorting algorithms is the ability to sort along specific rows or columns of a multidimensional array using the axis argument. For example:

Sorting along rows or columns

A useful feature of NumPy's sorting algorithms is the ability to sort along specific rows or columns of a multidimensional array using the axis argument. For example:

In [131]:

```
np.random.seed(1)
X = np.random.randint(0, 10, (4, 6))
print(X)
```

```
[[5 8 9 5 0 0]
 [1 7 6 9 2 4]
 [5 2 4 2 4 7]
 [7 9 1 7 0 6]]
```

Sorting along rows or columns

A useful feature of NumPy's sorting algorithms is the ability to sort along specific rows or columns of a multidimensional array using the axis argument. For example:

In [131]:

```
np.random.seed(1)
X = np.random.randint(0, 10, (4, 6))
print(X)
```

```
[[5 8 9 5 0 0]
 [1 7 6 9 2 4]
 [5 2 4 2 4 7]
 [7 9 1 7 0 6]]
```

In [132]:

```
# sort each column of X
# np.sort returns a copy of X after sorted. It does not modify X
np.sort(X, axis=0)
```

Out[132]:

```
array([[1, 2, 1, 2, 0, 0],
       [5, 7, 4, 5, 0, 4],
       [5, 8, 6, 7, 2, 6],
       [7, 9, 9, 9, 4, 7]])
```

Sorting along rows or columns
